

## CLAIMS

1. A polycarbonate type resin composition comprising polycarbonate type resin (A), 0.001 to 0.1 part by mass of arylphosphine (B) and 0.01 to 1.0 part by mass of an alicyclic epoxy compound (C) per 100 parts by mass of the component (A).
2. A polycarbonate type resin composition comprising polycarbonate type resin (A), 0.001 to 0.1 part by mass of arylphosphine (B), 0.01 to 1.0 part by mass of an alicyclic epoxy compound (C), and 0.01 to 1.0 part by mass of an acrylic type resin (D) per 100 parts by mass of the component (A).
3. A polycarbonate type resin composition according to claim 1 or 2, which further contains, 0.01 to 1 part by mass of a polysiloxane compound (E) having at least one kind of groups selected from alkoxy, vinyl, and phenyl groups per 100 parts by mass of the component (A).
4. A polycarbonate type resin composition according to any of claims 1 to 3, which further contains 0.01 to 1 part by mass of a lubricant (F) per 100 parts by mass of the component (A).
5. A polycarbonate type resin composition according to any of claims 1 to 4, wherein the component (A) of polycarbonate type resin has a glass transition temperature of 140°C or more.
6. A polycarbonate type resin composition according to any of claims 1 to 5, wherein the component (B) of arylphosphine is triphenylphosphine.
7. An optical part obtained by molding the polycarbonate type resin composition according to any of claims 1 to 6.
